AWS CC1

Question 1:-

i) Creating ec2 instance and keypair using the name “ec2usecase1”.

ii) EC2 instance AMI should be “Amazon Linux 2”.

Browser tabs: (1) WhatsApp, SKCET, EC2 Management Console. Address bar: https://us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#LaunchInstances:

iii) Allow SSH traffic for taking putty remote connection.

The first screenshot shows the 'Launch wizard' for an EC2 instance. In the 'Firewall (security groups)' step, the 'Create security group' option is selected. A new security group named 'launch-wizard-3' is being created with the following rules:

- ☒ Allow SSH traffic from: Anywhere (0.0.0.0/0)
- ☐ Allow HTTPS traffic from the internet
- ☐ Allow HTTP traffic from the internet

A warning message states: 'Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.'

The 'Summary' section shows:

- Number of instances: 1
- Software Image (AMI): Amazon Linux 2 Kernel 5.10 AMI (ami-03c7d01cf4d6dc891)
- Virtual server type (instance type): t2.micro
- Firewall (security group): New security group
- Storage (volumes): 1 volume(s) - 8 GiB

The 'Launch instance' button is visible.

The second screenshot shows the 'Instances' page in the AWS Management Console. Two instances are listed:

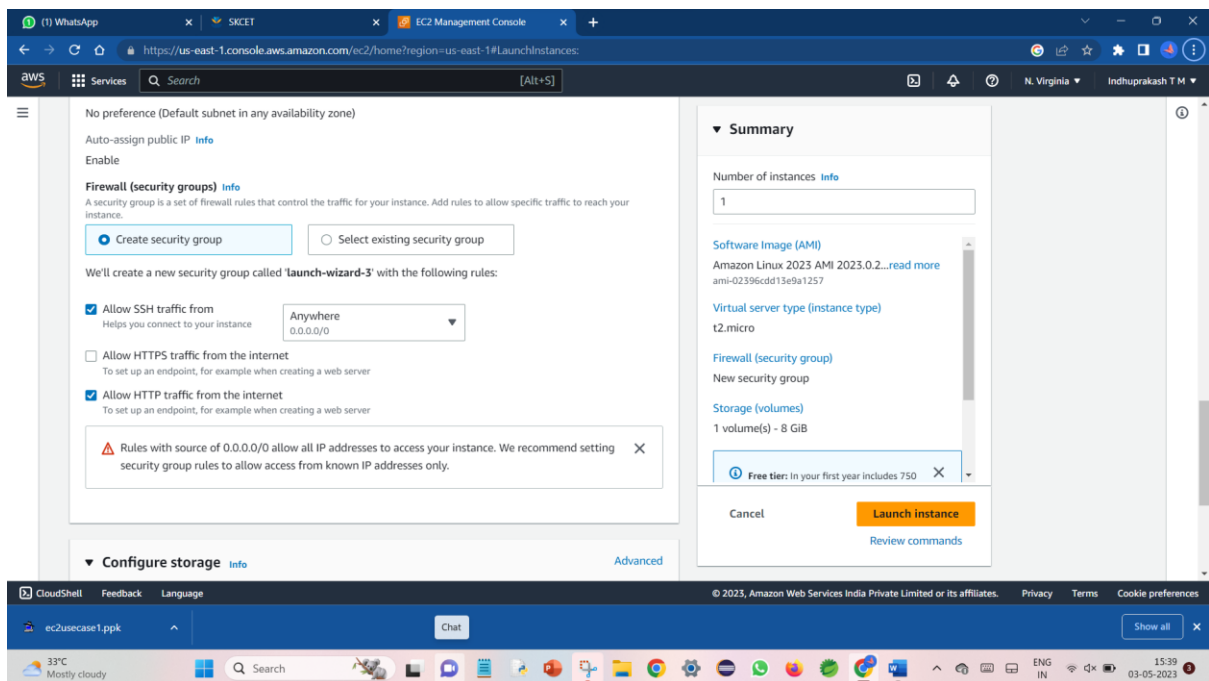

Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone	Public IPv4 DNS
ec2usecase1	i-0eb54e4e849ad52e2	Running	t2.micro	Initializing	No alarms	us-east-1c	ec2-3-85-244-13
ec2usecase1	i-0f01b4122a091e332	Running	t2.micro	2/2 checks passed	No alarms	us-east-1c	ec2-52-204-145-

The details for instance 'i-0eb54e4e849ad52e2 (ec2usecase1)' are shown below:

- Security groups:** sg-0d555f4c44bfe1d64 (launch-wizard-2)
- Inbound rules:**

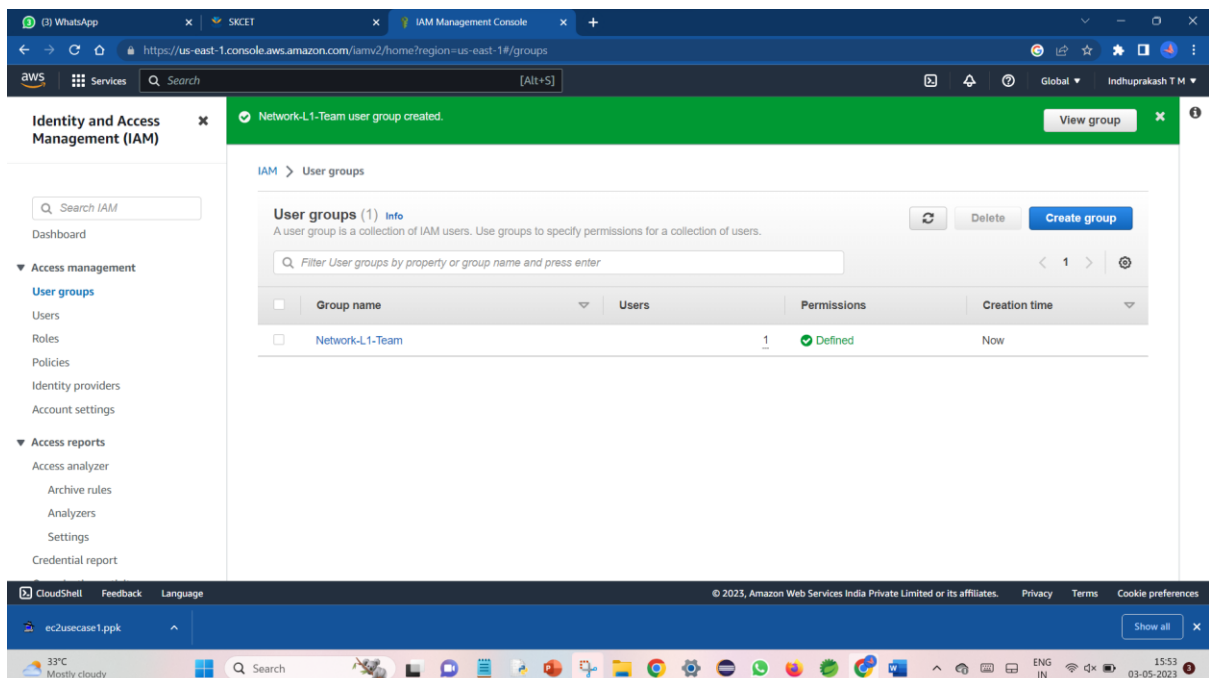

Name	Security group rule ID	Port range	Protocol	Source	Security groups
-	sgr-00446f40b8cb96a0e	22	TCP	0.0.0.0/0	launch-wizard-2

iv) Allow HTTP traffic from the internet for reaching website requests.

ii)

The image displays two screenshots of the AWS IAM Management Console interface, showing the process of creating a user and managing user groups.

Top Screenshot: IAM Management Console - Users

- Header:** IAM Management Console, URL: <https://us-east-1.console.aws.amazon.com/iamv2/home?region=us-east-1#/users>
- Notification:** User created successfully. You can view and download the user's password and email instructions for signing in to the AWS Management Console. [View user]
- Breadcrumb:** IAM > Users
- Section:** Users (1) Info. An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.
- Search:** Find users by username or access key
- Table:**

<input type="checkbox"/>	User name	Groups	Last activity	MFA	Password age	Active key age
<input type="checkbox"/>	Network-L1-User1	None	Never	None	None	-

Bottom Screenshot: IAM Management Console - Create user group

- Header:** IAM Management Console, URL: <https://us-east-1.console.aws.amazon.com/iamv2/home?region=us-east-1#/groups/create>
- Breadcrumb:** IAM > User groups > Create user group
- Section:** Create user group
- Form:** Name the group. User group name. Enter a meaningful name to identify this group. Network-L1-Team. Maximum 128 characters. Use alphanumeric and "+, -, @, _" characters.
- Section:** Add users to the group - Optional (Selected 1/1) Info. An IAM user is an entity that you create in AWS to represent the person or application that uses it to interact with AWS. A user can belong to up to 10 groups.
- Search:** Search
- Table:**

<input checked="" type="checkbox"/>	User name	Groups	Last activity	Creation time
<input checked="" type="checkbox"/>	Network-L1-User1	0	None	2 minutes ago

iii)

The screenshot shows the AWS IAM console in the 'us-east-1' region, specifically the 'Create group' page. The left sidebar shows the 'Identity and Access Management (IAM)' menu with options like Dashboard, Access management, Access reports, and Credential report. The main content area shows a table with one user, 'Network-L1-User1', and a section for attaching permissions policies. One policy, 'AmazonVPCEndpointAccess', is selected. The bottom of the console shows a Windows taskbar with various application icons and a system tray displaying the date and time.

User name	Groups	Last activity	Creation time
Network-L1-User1	0	None	3 minutes ago

Attach permissions policies - Optional (Selected 1/843) Info

You can attach up to 10 policies to this user group. All the users in this group will have permissions that are defined in the selected policies.

Filter policies by property or policy name and press enter. 1 match

*AmazonVPCEndpointAccess X Clear filters

Policy name	Type	Description

3.

i)

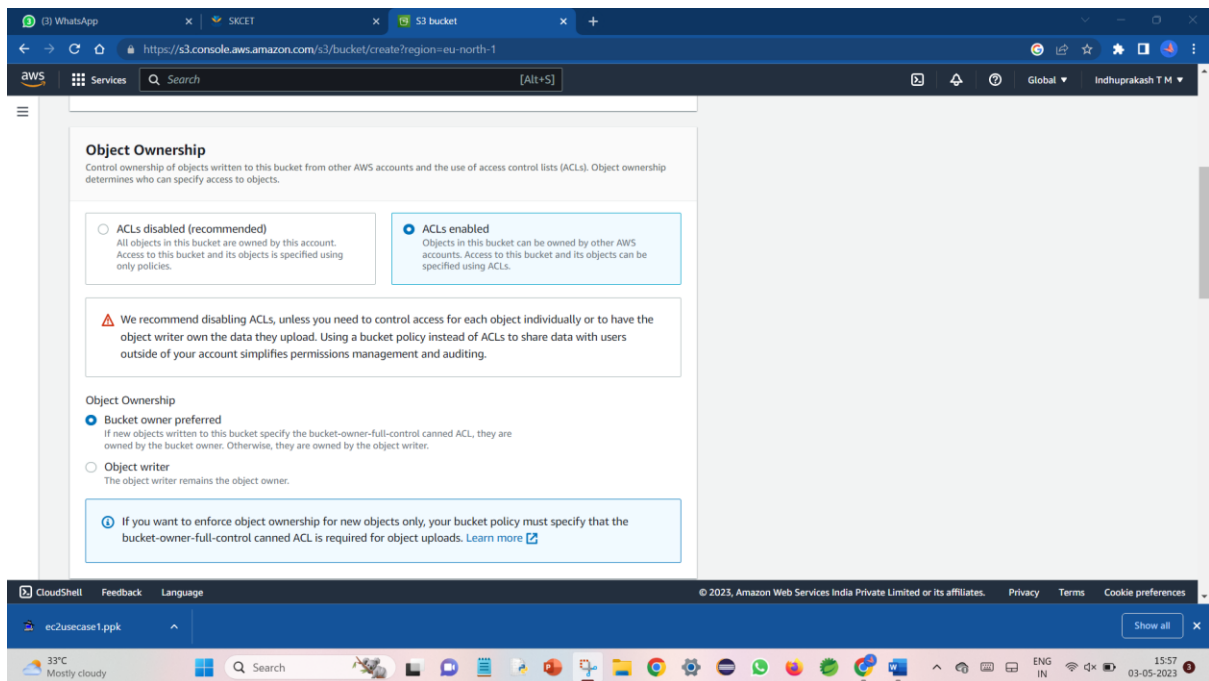

The first screenshot shows the 'Create bucket' page in the AWS S3 console. The 'Bucket name' field is filled with 'prakashbucks'. The 'AWS Region' is set to 'EU (Stockholm) eu-north-1'. Below the form, there is a section for 'Object Ownership' with a 'Choose bucket' button.

The second screenshot shows the 'Buckets' page after the bucket has been created. A green notification banner at the top states 'Successfully created bucket "prakashbucks"'. Below this, the 'Account snapshot' section is visible. The 'Buckets (1)' section shows a table with one bucket:

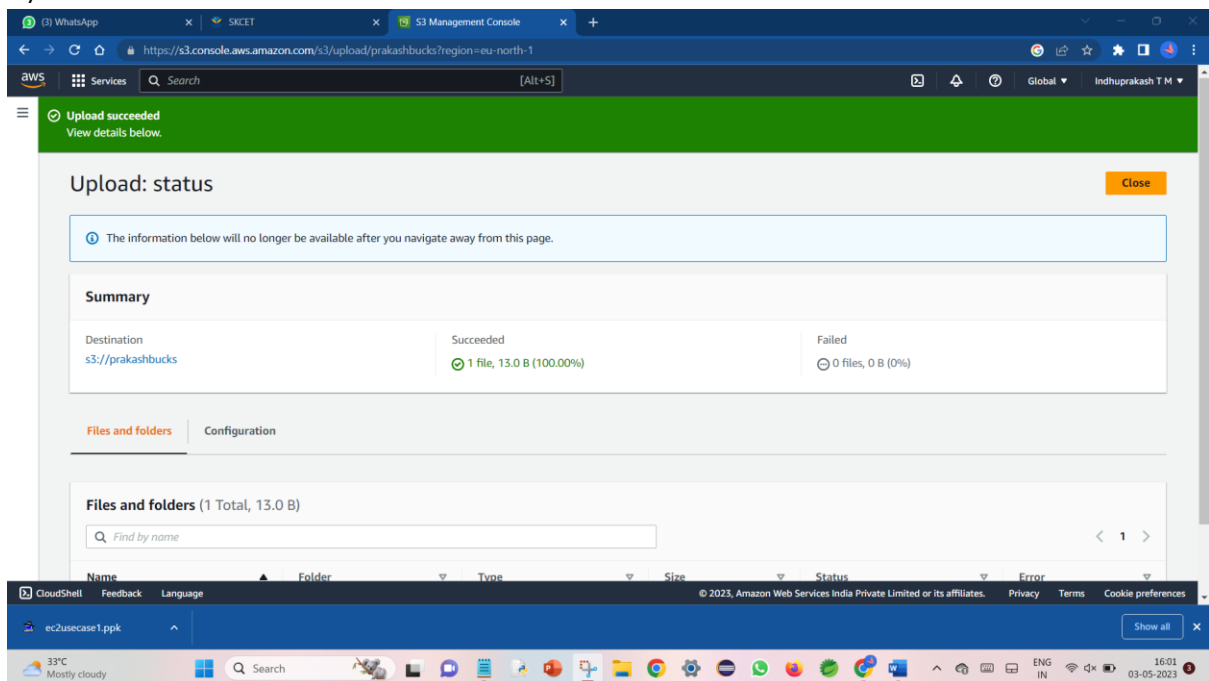

Name	AWS Region	Access	Creation date
prakashbucks	EU (Stockholm) eu-north-1	Objects can be public	May 3, 2023, 15:59:14 (UTC+05:30)

The left sidebar of the console shows the navigation menu with options like 'Buckets', 'Access Points', 'Object Lambda Access Points', 'Multi-Region Access Points', 'Batch Operations', 'IAM Access Analyzer for S3', 'Storage Lens', 'Dashboards', 'AWS Organizations settings', 'Feature spotlight', and 'AWS Marketplace for S3'.

Object management overview

The following bucket properties and object management configurations impact the behavior of this object.

Bucket properties

Bucket Versioning
When enabled, multiple variants of an object can be stored in the bucket to easily recover from unintended user actions and application failures.

Disabled

Warning: Bucket "prakashbucks" doesn't have Bucket Versioning enabled
We recommend that you enable Bucket Versioning to help protect against unintentionally overwriting or deleting objects. [Learn more](#)

[Enable Bucket Versioning](#)

Management configurations

Replication status
When a replication rule is applied to an object the replication status indicates the progress of the operation.

-

[View replication rules](#)

Expiration rule
You can use a lifecycle configuration to define expiration rules to schedule the removal of this object after a pre-defined time period.

-

Expiration date
The object will be automatically deleted on this date.
